RECEIVER WITH WIRELESS INPUT DEVICE

ABSTRACT OF THE DISCLOSURE

A receiver with wireless input device is described. The receiver comprises a receiving device and a wireless input device (wireless mouse). The receiving device comprises a signal receiver having an extendable connecting element and a receiving space for receiving the wireless input device. The wireless input device can be used within the receiving range of the receiving device to transmit the inputted signals to the computer and for controlling the cursor of the computer wirelessly. The receiving device comprises a charging element in the receiving space, and the wireless input device is equipped with a corresponding element for connecting with the charging element. When fitting the wireless input device into the receiving space, the corresponding element of the wireless input device comes in contact with the charging element for charging the power therein.
